

#### § 328.4

water and indicated by physical characteristics such as a clear, natural line impressed on the bank, shelving, changes in the character of soil, destruction of terrestrial vegetation, the presence of litter and debris, or other appropriate means that consider the characteristics of the surrounding areas.

(7) *High tide line.* The term *high tide line* means the line of intersection of the land with the water's surface at the maximum height reached by a rising tide. The high tide line may be determined, in the absence of actual data, by a line of oil or scum along shore objects, a more or less continuous deposit of fine shell or debris on the foreshore or berm, other physical markings or characteristics, vegetation lines, tidal gages, or other suitable means that delineate the general height reached by a rising tide. The line encompasses spring high tides and other high tides that occur with periodic frequency but does not include storm surges in which there is a departure from the normal or predicted reach of the tide due to the piling up of water against a coast by strong winds such as those accompanying a hurricane or other intense storm.

#### § 328.4 Limits of jurisdiction.

(a) *Territorial Seas.* The limit of jurisdiction in the territorial seas is measured from the baseline in a seaward direction a distance of three nautical miles. (See 33 CFR 329.12)

(b) *Tidal waters of the United States.* The landward limits of jurisdiction in tidal waters:

(1) Extends to the high tide line, or

(2) When adjacent non-tidal waters of the United States are present, the jurisdiction extends to the limits identified in paragraph (c) of this section.

(c) *Non-tidal waters of the United States.* The limits of jurisdiction in non-tidal waters:

(1) In the absence of adjacent wetlands, the jurisdiction extends to the ordinary high water mark, or

(2) When adjacent wetlands are present, the jurisdiction extends beyond the ordinary high water mark to the limit of the adjacent wetlands.

(3) When the water of the United States consists only of wetlands the jurisdiction extends to the limit of the wetland.

#### 33 CFR Ch. II (7–1–15 Edition)

#### § 328.5 Changes in limits of waters of the United States.

Permanent changes of the shoreline configuration result in similar alterations of the boundaries of waters of the United States. Gradual changes which are due to natural causes and are perceptible only over some period of time constitute changes in the bed of a waterway which also change the boundaries of the waters of the United States. For example, changing sea levels or subsidence of land may cause some areas to become waters of the United States while siltation or a change in drainage may remove an area from waters of the United States. Man-made changes may affect the limits of waters of the United States; however, permanent changes should not be presumed until the particular circumstances have been examined and verified by the district engineer. Verification of changes to the lateral limits of jurisdiction may be obtained from the district engineer.

#### PART 329—DEFINITION OF NAVIGABLE WATERS OF THE UNITED STATES

Sec.

329.1 Purpose.

329.2 Applicability.

329.3 General policies.

329.4 General definition.

329.5 General scope of determination.

329.6 Interstate or foreign commerce.

329.7 Intrastate or interstate nature of waterway.

329.8 Improved or natural conditions of the waterbody.

329.9 Time at which commerce exists or determination is made.

329.10 Existence of obstructions.

329.11 Geographic and jurisdictional limits of rivers and lakes.

329.12 Geographic and jurisdictional limits of oceanic and tidal waters.

329.13 Geographic limits: Shifting boundaries.

329.14 Determination of navigability.

329.15 Inquiries regarding determinations.

329.16 Use and maintenance of lists of determinations.

AUTHORITY: 33 U.S.C. 401 *et seq.*
